Hi

Congratulations! We are pleased to inform you that you have been shortlisted for the next stage of our AI Engineer Intern role at Zycus.

As part of the evaluation, we'd like you to complete the attached technical assignment. This exercise is designed to assess your problem-solving approach, AI application skills, and ability to communicate insights effectively.

Assignment: Project Health Reporting Agent

Context

You've just joined the Professional Services team. Leadership wants visibility into project health without manually chasing Project Managers every week. Your task is to build a system that provides automated project health reporting.

Phase 1 – Define your framework (before coding)

In one page, define how you'll determine the RAG (Red/Amber/Green) status.

Consider factors such as:

- Schedule slippage
- Budget burn
- Milestone health
- Blockers
- Stakeholder sentiment
- Any other relevant indicators

Clearly explain how these signals map to a RAG status and mention any assumptions you make about the data.

Phase 2 – Build the agent

Build an AI agent that:

- Reads a project plan
- Determines the RAG status
- Provides clear, plain-English reasoning behind the status (not just the color)
- Handles incomplete or messy data gracefully

Bonus (Optional):
Make the agent runnable on a weekly schedule.

Phase 3 – Monthly synthesis

Using the outputs across the sample project plans, automatically generate a 5–7 slide executive presentation that a VP could present to a client with minimal edits.

The presentation should:

- Identify trends across projects (instead of simply summarizing each one)
- Highlight emerging risks
- Provide executive-level insights and recommendations

Deliverables

- One-page RAG methodology
- Working AI agent (code + instructions to run)
- Sample weekly outputs for each project plan
- Final monthly presentation (5–7 slides)
- A short README or a 2-minute Loom video explaining your design decisions

Please submit your completed assignment by **10 July 2026** EOD by replying to this email. You may share your solution as a GitHub repository or a ZIP file along with any supporting documentation.

If you have any questions or need clarification regarding the assignment, feel free to reply to this email.

We look forward to reviewing your submission.

Best regards,

Muskan Jindal
